

Automated 3D Stenosis Quantification and Visualization Workflow for Coronary Artery Disease Clinical Decision Support

Adrià Cortés Cugat

UPF Tutor: Pr. Oscar Camara Rey

Supervisor: César Acebes Pinilla

Bachelor's degree in Mathematical Engineering in Data Science

Academic Year 2025 - 2026

**Universitat
Pompeu Fabra**
Barcelona

SANT PAU
Campus Salut
Barcelona

Hospital de
la Santa Creu i
Sant Pau

Index

1. Introduction

- 1.1. Clinical Context and Motivation
 - 1.1.1. Anatomy of Coronary Arteries
 - 1.1.2. Coronary Artery Disease
 - 1.1.3. Stenosis Quantification: A Key Indicator of CAD Severity
 - 1.1.4. CAD-RADS 2.0 and the Need for Decision Support
- 1.2. Clinical Automation Challenges at Hospital de la Santa Creu i Sant Pau
 - 1.2.1. Current CAD Diagnostic Workflow and Associated Limitations
 - 1.2.2. The Bottleneck: Manual Image Analysis and Reporting
- 1.3. State of The Art: Automation of CAD Diagnosis & Visualization
- 1.4. Project Scope and Contributions
- 1.5. Objectives

2. Methodology

- 2.1. System Overview and Core Automated Workflow
- 2.2. Dataset: ASOCA and MACS-18 Annotations
- 2.3. Block 1: 3D Artery Anatomy Extraction
- 2.4. Block 2: Geometric Stenosis Quantification
- 2.5. Block 3: Artery Labeling and CAD-RADS 2.0 Scoring
- 2.6. Block 4: Patient Visualization Dashboard
- 2.7. Experimental Design and Validation Framework
 - 2.7.1. Workflow Validation on Real Datasets: ASOCA
 - 2.7.2. Workflow Validation on Real Datasets: MACS-18
 - 2.7.3. Geometry and Quantification Verification: Synthetic Data
 - 2.7.4. User Experience and Interface Usability Evaluation

3. Results

- 3.1. Pipeline Execution on ASOCA
- 3.2. Pipeline Execution on MACS-18
- 3.3. Geometric and Algorithmic Accuracy via Synthetic Data
- 3.4. Coronary Artery Dashboard Visualization Output
- 3.5. User Experience and Interface Usability Evaluation

4. Discussion

- 4.1. Analysis of the Results
- 4.2. Technical and Anatomical Limitations

4.3. Future Work

5. Conclusions
